タイトル： On the Conflict between Importing and Exporting Countries
over Sanitary and Phytosanitary (SPS) Measures

報告者氏名： 東田啓作

所属： 福島大学経済経営学類

要旨： This paper examines conflict between trading countries over Sanitary and Phytosanitary (SPS) measures, focusing on externalities through trade in fruits that damage production in an importing country. Two different phases before and after infection are considered. After infection, infectiousness and loss rates of production affects the optimal policies for the government of the importing country and, accordingly, conflict between trading countries before infection. I demonstrate some conditions under which conflict becomes more or less serious. Moreover, I discuss sharing of costs of the externalities.
