

Industrialization with A Leader of the manufacturing sector and International Trade

Keita Kamei*

Graduate School of Economics, Kyoto University

Abstract

In this paper, we construct a theoretical model that the government provides the manufacturing sector with the leader who teaches management, marketing, and basic technology for using modern technology the worker in the manufacturing sector. A large increase in the supply of the leader may decrease in the growth rate of the manufacturing productivity and may delay free trade. If NGOs and foreign aid agencies fill the role of the leader, then they make it easier for the development country to accomplish the industrialization.

Keyword: leader of manufacturing sector, industrialization, economic development, international trade.

JEL classification: F43, F10, O14
